DETAILED ACTION

Claim Rejections - 35 USC § 112

Claim 20 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 20, line 2, "the substrate member" lacks antecedent basis. It is suggested to write this as "the support member".

Allowable Subject Matter

Claims 1-6, 8-19 and 21-26 allowed.

Claim 20 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.

The following is a statement of reasons for the indication of allowable subject matter:

Claims 1-6 and 8-18 are allowable over the prior art of record because the prior art of record does not teach the claimed subject matter including introducing a first process gas into the reactor chamber during a first time period and introducing a second process gas having a different composition than the first process gas during a second time period which follows the first time period and causing the electromagnetic field to have an energy level which varies cyclically between at least two values each sufficient to maintain the plasma, such that each energy level value is associated with performance of a respective different treatment process on the substrate.

Art Unit: 1753

Claims 19 and 21-26 are allowable over the prior art of record because the prior art of record does not teach the claimed subject matter including a gas injection assembly immediately proximate the plasma region, the gas injection assembly configured to introduce a first process gas into the chamber during a first time period and introduce a second process gas having a different composition than the first process gas during a second time period which follows the first time period wherein the gas injection assembly comprises a gas injection plate provided with a plurality of gas injection nozzles, a plurality of gas injection valves, each configured to supply at least one of the first or second process gases to at least one respective one of the nozzles, and a plurality of valve controllers coupled to the plurality of gas injection valves to cause the first or second process gas to be supplied to each of the nozzles in an intermittent manner.

Response to Arguments

Applicant's arguments filed 2-22-2006 have been fully considered.

Applicant's arguments have overcome the previous rejections. The remaining issue is a 35 U.S.C. 112 2nd paragraph rejection to claim 20. A telephone call was made on May 1, 2006 to Jeffrey Karceski to request an examiner's amendment but did not result in an examiner's amendment being made formally. It is requested that Applicant corrects this claim to put the case into condition for allowance.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Rodney G. McDonald whose telephone number is 571-272-1340. The examiner can normally be reached on M- Th with Every other Friday off.
